

Name: Frank Gunsch

- A Picture of you

- A Paragraph about your computer experience. Include your undergrad major, any computer courses you've taken, any programs you've written, any projects you've collaborated on.

My undergrad major is computer science. I just finished the comp sci associates program at dutchess community college in Fall 22 . I've written a few programs as a hobbyist: lots of mini visualization demos (codepen), videogame RPG simulation software, a basic CRUD forum + school work programs and some others I probably don't remember. I've collaborated on a simple data REST api for an MMO game.

- A Paragraph about how you see yourself using what we learn in this course

In industry as a software developer - maybe in a big city or something or IBM. As a hobbyist/for fun I would say just making something in relation to whatever I'm interested in at the time - it changes a lot.
